ONUS WOOD

Install guide: Pendants and candelabras

General guidance for Onus Wood pendants and candelabras. Your product may include extra instructions; where they differ, follow those.

1

Before you start

Hard-wired pendants and candelabras must be installed by a licensed electrician, in line with AS/NZS 3000. Turn the power off at the switchboard before any work begins.

2

Check the parts

Unpack on a soft surface. You should have the light, the timber canopy with its mounting plate, the fabric cable and, for candelabras, the suspension cables and fixings. Keep the packaging until the light is installed.

3

Mount the plate

Fix the canopy mounting plate to a ceiling joist or a suitably rated fixing point. Candelabras carry more weight and need two fixing points spaced to suit the frame.

4

Set the drop

Hang the light so the bottom of the shade sits about 700 to 800 mm above a dining table or bench. Cut the cable to length, leaving enough slack for the terminations.

5

Connect and close

Your electrician connects the cable at the mounting plate, then slides the timber canopy up and secures it. Fit the LED globe or module supplied.

6

Switch on

Restore power and test. Dimmable models need a compatible trailing-edge LED dimmer.

Safety: never install, adjust or clean a light with the power on. Use only the LED globes or modules specified for your product. If a cord, fitting or diffuser is damaged, stop using the light and contact us for a replacement part.
